Please use the following to prepare for the next SfS lesson.

Description:

This foundational lesson introduces the concept of a conditional statement, relating it initially to students’ everyday decision-making processes, and then using a game to allow students to observe the execution of conditional statements as they would occur within the context of running a computer program.

Lesson Objectives – SWBAT (“Students Will Be Able To…”):

5th-8th

- Model receiving inputs, evaluating conditional statements (code), and executing an output as a computer would
- Design and test their own conditional statement codes to achieve specific outputs

Disciplinary Core Idea (DCI):

ETS1: Engineering Design

- \((3^{rd}-5^{th})\) ETS1.A: Defining and Delimiting an Engineering Problem – The success of a designed solution is determined by considering the desired features of a solution (criteria).
- \((3^{rd}-5^{th})\) ETS1.B: Developing Possible Solutions – Tests are often designed to identify failure points or difficulties, which suggest the elements of the design that need to be improved.

Science & Engineering Practice (SEP):

Developing and Using Models

- \((3^{rd}-5^{th})\) Use a model to test cause and effect relationships or interactions concerning the functioning of a natural or designed system

Using Mathematics and Computational Thinking

- \((6^{th}-8^{th})\) Create algorithms to solve a problem

Crosscutting Concept (CCC)

Systems and System Models

- \((3^{rd}-5^{th})\) A system can be described in terms of its components and their interactions
- \((6^{th}-8^{th})\) Models can be used to represent systems and their interactions—such as inputs, processes and outputs—and energy, matter, and information flows within systems.

Preparation:

This lesson is introductory and assumes no prior preparation.

Room Set Up for Activities:

Students will work in pairs at their desks.
Safety:

There are no safety concerns with this lesson.

Related Modules:

This lesson may be taught as part of a sequence or group of related modules on Technology & Coding. Modules include:

Technology 1: Binary Code, or How to Speak Computer – Students get their first taste of binary through a series of activities focusing on encoding and decoding.

Technology 4: Cryptography – A module full of fun activities introducing the basics of encryption, which has evolved into a critical element in modern data storage and Internet transactions.

Scientific Practices 1: Procedural Thinking – Students learn the importance of creating and following clear and ordered plans. Students create simple Lego designs, write instructions, and then try to replicate the creation of a classmate using only the other student's written instructions.

For other module sequences and groups, look here: www.sciencefromscientists.org/sequences

Standards Covered:

Please click the following link to our website to review the standards covered by this lesson, listed by state: http://www.sciencefromscientists.org/standards/

Lessons are matched to both national NGSS and local state standards.

After Our Visit:

Extend this lesson by making your own self-driving car maze.

Access this Extension activity by visiting the Classroom Post found on our website at sciencefromscientists.org/cohorts. Use the name of your school/cohort and password to log in.

To help Evaluate, check out our Open Response questions online at sciencefromscientists.org/open-response-questions. They are freely available for all of our lessons for current teachers. Use the password supplied by your instructor to log in.
